Security Incident & Event Management

There are two types of organizations, those that have been hacked and those that will be hacked.

The Problem(s)

It's Getting Worse

Why It Matters

WHAT'S YOUR RISK?

- $ Financial Risk
- Operational Risk
- Litigation Risk
- Reputational Risk

What can we do about it?

- How many of you perform an annual financial audit?
- How many of you perform an annual security audit?
- Would an annual security audit really help?
- Isn't the security of our data just as important as the health of our financials?

What if you could perform security audits daily?
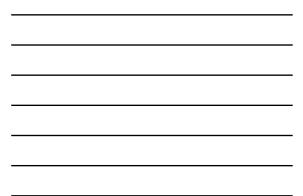

- Well you can:
- Security Incident and Event Management
  - Constant Log monitoring and correlation
  - Daily Vulnerability scanning
  - Configuration Monitoring
  - Intrusion Prevention

We've got you covered.

Don't Forget Your Cards!
